(54) **PICTURE PROCESSOR**

(57) Abstract:

PROBLEM TO BE SOLVED: To reduce a memory capacity by storing only the program corresponding to a necessary function but not the program corresponding to the function less in use frequency.

SOLUTION: This picture processor is provided with a function information storage means M103 for storing the function information which indicates a function of picture processing and a relation with the program, a program storage means M105 for storing a program needed fox execution of the function, and execution instruction means M101 for instructing the function execution, a program decision means M102 for deciding a program needed for execution of the instructed function on the basis of the function information, a program input means M106 for inputting the decided program from a server device by way of a network when the decided program is not stored in the program storage means M105 and a program execution means M104 for executing a program of the instructed function program.
